Animas River Treatability Study [110609].pdf

Shaun,

Dr. Ken Carlson here at CSU has been involved in setting up a public private partnership with a company called Water Tectonics to treat flowback water. It happens that Water Tectonics did a 2009 study regarding the Animas River entitled the Animas River Treatability Study, a part of which was specific to the Gold King Mine. I have attached that study to this email. Dr. Carlson asked that I forward the study to you, along with an offer from CSU and Water Tectonics to assist in any way that would be helpful in the aftermath of the spill. Should you want to contact Dr. Carlson, who is our resident expert in water treatment, I have copied him on this email.

I know these are trying times for you. Keep up the good work!

Thanks,

Bill
